

# toxvaldb09

July 26, 2022

**Type** Package

**Title** Builds the ToxValDB V9 Database

**Version** 1.0.1

**Author** Aswani Unnikrishnan

**Maintainer** Ricahrd Judson <judson.richard@epa.gov>

**Description** The database has 2 main parts - toxval\_source containing source data in separate tables, and the main toxval schema which combines data from multiple sources into a single format

**Imports** DBI,  
RMySQL,  
openxlsx,  
dplyr,  
tidyr,  
stringr,  
tibble,  
janitor,  
logr

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.2.0

**Suggests** knitr,  
rmarkdown

**VignetteBuilder** knitr

## R topics documented:

cas_checkSum . . . . .	5
chem.check . . . . .	6
chem.check.v2 . . . . .	7
clean.last.character . . . . .	7
clean.toxval.by.source . . . . .	8

toxval.load.osha_air_limits . . . . .	79
toxval.load.ow_dwsha . . . . .	79
toxval.load.penn . . . . .	80

**Value**

A logical vector of length  $x$  denoting whether each  $x$  is a valid CAS by the checksum method. NA input values will remain NA.

**Note**

This is a vectorized, reasonably high-performance version of the `is.cas` function found in the `webchem` package. The functionality encompasses only the actual checksum checking of `webchem::is.cas`; as mentioned in details, use `cas_detect` to recreate the CAS format + checksum checking in `webchem::is.cas`. See examples.

Short of looking up against the CAS registry, there is no way to be absolutely sure that even inputs that pass the checksum test are actually registered CAS RNs. The short digit length of CAS IDs combined with the modulo 10 single-digit checksum means that even within a set of randomly generated validly-formatted CAS entities, ~10% will pass checksum.

**Examples**

```
cas_good <- c("71-43-2", "18323-44-9", "7732-18-5") #benzene, clindamycin, water
cas_bad  <- c("61-43-2", "18323-40-9", "7732-18-4") #single digit change from good
cas_checkSum(c(cas_good, cas_bad))
```

---

chem.check

*Check the chemicals from a file Names with special characters are cleaned and trimmed CASRN are fixed (dashes put in, trimmed) and check sums are calculated The output is sent to a file called chemcheck.xlsx in the source data file One option for using this is to edit the source file until no errors are found*

---

**Description**

Check the chemicals from a file Names with special characters are cleaned and trimmed CASRN are fixed (dashes put in, trimmed) and check sums are calculated The output is sent to a file called chemcheck.xlsx in the source data file One option for using this is to edit the source file until no errors are found

**Usage**

```
chem.check (
  res0,
  name.col = "name",
  casrn.col = "casrn",
  source = NULL,
  verbose = F
)
```

**Arguments**

<code>res0</code>	The data frame in which chemicals names and CASRN will be replaced
<code>name.col</code>	- The column name that contains the chemical names
<code>casrn.col</code>	- the column name that contains the CARN values
<code>indir</code>	The directory where the output file will be placed

---

<code>chem.check.v2</code>	<i>Check the chemicals from a file Names with special characters are cleaned and trimmed CASRN are fixed (dashes put in, trimmed) and check sums are calculated The output is sent to a file called chem-check.xlsx in the source data file One option for using this is to edit the source file until no errors are found</i>
----------------------------	--

---

**Description**

Check the chemicals from a file Names with special characters are cleaned and trimmed CASRN are fixed (dashes put in, trimmed) and check sums are calculated The output is sent to a file called chemcheck.xlsx in the source data file One option for using this is to edit the source file until no errors are found

**Usage**

```
chem.check.v2(res0, source = NULL, verbose = F)
```

**Arguments**

<code>res0</code>	The data frame in which chemicals names and CASRN will be replaced
<code>indir</code>	The directory where the output file will be placed

---

<code>clean.last.character</code>	<i>Clean unneeded characters from the end of a string</i>
-----------------------------------	---

---

**Description**

Clean unneeded characters from the end of a string

**Usage**

```
clean.last.character(x)
```

**Arguments**

<code>x</code>	String to be cleaned
----------------	----------------------

```
clean.toxval.by.source
```

*Delete a portion of the contents of the toxval database*

---

### Description

Delete a portion of the contents of the toxval database

### Usage

```
clean.toxval.by.source(toxval.db, source)
```

### Arguments

<code>toxval.db</code>	The version of toxval from which the data is deleted.
<code>source</code>	The data source name

### Value

The database will be altered

---

```
clowder_document_list
```

*Get a listing of all of the documents in clowder and link back to information in dev\_toxval\_v8*

---

### Description

Get a listing of all of the documents in clowder and link back to information in dev\_toxval\_v8

### Usage

```
clowder_document_list(db = "dev_toxval_v8", indir = "../clowder_v3/")
```

### Arguments

<code>db</code>	The version of toxval into which the source is loaded.
<code>dir</code>	The directory where the files live

---

clowder\_id\_prep.v2 *Organize the clowder\_id and document\_name information*

---

**Description**

Organize the clowder\_id and document\_name information

**Usage**

```
clowder_id_prep.v2(db = "dev_toxval_v9", indir = "../clowder_v2/")
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile1	The input file ./PFAS Summary PODs/PFAS Summary PODs_files/PFAS 150 Study Level PODs_061920.xlsx
infile2	The input file ./PFAS Summary PODs/PFAS Summary PODs_files/CompToxChemicalsDashboard-Batch-Search_2020-07-20_17_18_42.xls

---

clowder\_id\_prep.v3 *Organize the clowder\_id and document\_name information*

---

**Description**

Organize the clowder\_id and document\_name information

**Usage**

```
clowder_id_prep.v3(db = "dev_toxval_v9", indir = "../clowder_v3/")
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile1	The input file ./PFAS Summary PODs/PFAS Summary PODs_files/PFAS 150 Study Level PODs_061920.xlsx
infile2	The input file ./PFAS Summary PODs/PFAS Summary PODs_files/CompToxChemicalsDashboard-Batch-Search_2020-07-20_17_18_42.xls toxval_v8_record_source_hash_to_clowder_id.xlsx File from clowder linking clowder_ids to document_names, generated by Taylor Wall clowder_doc_maps_20220608.xlsx

---

contains	<i>Find out if one string contains another</i>
----------	--

---

### Description

Find out if one string contains another

### Usage

```
contains(x, query, verbose = F)
```

### Arguments

x	The string to be searched in
query	the second string
verbose	if TRUE, the two strings are printed

### Value

if x contains query, return TRUE, FALSE otherwise

---

ecotox.datahub.to.file	<i>Extract ECOTOX from the datahub to a file</i>
------------------------	--

---

### Description

Extract ECOTOX from the datahub to a file

### Usage

```
ecotox.datahub.to.file(toxval.db, verbose = T, do.load = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
verbose	Whether the loaded rows should be printed to the console.
do.load	If TRUE, load the data from the input file and put into a global variable

---

`export.all.by.source`

*Build a data frame of the data from toxval and export by source as a series of xlsx files*

---

**Description**

Build a data frame of the data from toxval and export by source as a series of xlsx files

**Usage**

```
export.all.by.source(toxval.db, source = NULL)
```

**Arguments**

<code>toxval.db</code>	Database version
<code>source</code>	The source to be updated #' @return for each source writes an Excel file with the name ../export/export_by_source_data/toxval_all_toxval.db_source.xlsx

---

`export.dsstox`

*Export the DSSTox chemical table*

---

**Description**

Export the DSSTox chemical table

**Usage**

```
export.dsstox()
```

---

`export.final.params`

*Export the final values for the character params (e.g. toxval\_type).*

---

**Description**

Export the final values for the character params (e.g. toxval\_type).

**Usage**

```
export.final.params(toxval.db)
```

**Arguments**

<code>toxval.db</code>	The version of toxval in which the data is altered.
------------------------	---

---

```
export.missing.rac.by.source
```

*Export the rows with a missing risk\_assessment\_class*

---

**Description**

Export the rows with a missing risk\_assessment\_class

**Usage**

```
export.missing.rac.by.source(toxval.db, source)
```

**Arguments**

toxval.db      Database version

**Value**

writes an Excel file with the name ./qc\_export/toxval\_missing\_risk\_assessment\_class\_Sys.Date().xlsx"

---

```
export.source_chemical
```

*Export the source chemical table*

---

**Description**

Export the source chemical table

**Usage**

```
export.source_chemical(db, dir = "../source_chemical/")
```

**Arguments**

db                      The name of the database String to be cleaned  
dir                     The directory where the file will be saved

---

```
fill.chemical.by.source
```

*Fill the chemical table*

---

### Description

Fill the chemical table

### Usage

```
## S3 method for class 'chemical.by.source'
fill(toxval.db, source, verbose = T)
```

### Arguments

toxval.db	The version of toxvaldb to use.
verbose	If TRUE, print out extra diagnostic messages

---

```
fill.chemical_source_index
```

*Load the chemical\_source\_index table.*

---

### Description

Load the chemical\_source\_index table.

### Usage

```
## S3 method for class 'chemical_source_index'
fill(db)
```

### Arguments

db	The version of toxval_source into which the source is loaded.
----	---

---

```
fill.toxval.defaults
```

*Set Toxval Defaults*

---

### Description

Set Toxval Defaults

### Usage

```
## S3 method for class 'toxval.defaults'  
fill(toxval.db, mat)
```

### Arguments

toxval.db	The version of toxval from which to set defaults.
mat	An input matrix of data

### Value

The data matrix after fixing

---

```
fill.toxval.defaults.global.by.source
```

*Set Toxval Defaults globally*

---

### Description

Set Toxval Defaults globally

### Usage

```
## S3 method for class 'toxval.defaults.global.by.source'  
fill(toxval.db, source)
```

### Arguments

toxval.db	The version of toxval from which to set defaults.
-----------	---

---

`fix.all.param.by.source`

*Alter the contents of toxval according to an excel dictionary file with fields - exposure\_method, exposure\_route, sex, strain, study\_duration\_class, study\_duration\_units, study\_type, toxval\_type, exposure\_form, media, toxval\_subtype*

---

**Description**

Alter the contents of toxval according to an excel dictionary file with fields - exposure\_method, exposure\_route, sex, strain, study\_duration\_class, study\_duration\_units, study\_type, toxval\_type, exposure\_form, media, toxval\_subtype

**Usage**

```
fix.all.param.by.source(toxval.db, source = NULL, fill.toxval_fix = T)
```

**Arguments**

`toxval.db`      The version of toxval in which the data is altered.

**Value**

The database will be altered

---

`fix.casrn`

*Fix a CASRN that has one of several problems*

---

**Description**

Fix a CASRN that has one of several problems

**Usage**

```
fix.casrn(casrn, cname = "", verbose = F)
```

**Arguments**

`casrn`            Input CASRN to be fixed  
`cname`            An optional chemical name  
`verbose`          if TRUE, print the input values

**Value**

the fixed CASRN

---

```
fix.critical_effect.icf.by.source
```

*standardize critical\_effect in toxval table based on icf dictionary and  
toxval critical effects dictionary*

---

**Description**

standardize critical\_effect in toxval table based on icf dictionary and toxval critical effects dictionary

**Usage**

```
fix.critical_effect.icf.by.source(toxval.db, source)
```

**Arguments**

toxval.db      The version of toxvaldb to use.

---

```
fix.empty.by.source
```

*Set all empty cells in toxval to '-'*

---

**Description**

Set all empty cells in toxval to '-'

**Usage**

```
fix.empty.by.source(toxval.db, source)
```

**Arguments**

toxval.db      The version of toxval in which the data is altered.

**Value**

The database will be altered

---

```
fix.empty.record_source.by.source
```

*Set all empty cells in record\_source to '-'*

---

**Description**

Set all empty cells in record\_source to '-'

**Usage**

```
fix.empty.record_source.by.source(toxval.db, source)
```

**Arguments**

toxval.db      The version of toxval in which the data is altered.

**Value**

The database will be altered

---

```
fix.exposure_method.and.form.by.source
```

*Exposure Method temporary fix to add Exposure Form*

---

**Description**

Exposure Method temporary fix to add Exposure Form

**Usage**

```
fix.exposure_method.and.form.by.source(toxval.db, source)
```

**Arguments**

toxval.db      The database version to use  
source          The source to process

```
fix.generation.by.source
```

*Alter the contents of toxval according to an excel dictionary file with field generation*

---

**Description**

Alter the contents of toxval according to an excel dictionary file with field generation

**Usage**

```
fix.generation.by.source(toxval.db, source)
```

**Arguments**

toxval.db	The version of toxval in which the data is altered.
source	The source to be processes

**Value**

The database will be altered

---

```
fix.human_eco.by.source
```

*Fix the human\_eco flag*

---

**Description**

Fix the human\_eco flag

**Usage**

```
fix.human_eco.by.source(toxval.db, source, reset = T)
```

**Arguments**

toxval.db	The version of toxval in which the data is altered.
-----------	---

**Value**

The database will be altered

---

```
fix.non_ascii.v2
```

*Flag non ascii characters in the database*

---

**Description**

Flag non ascii characters in the database

**Usage**

```
fix.non_ascii.v2(df, source)
```

**Value**

The dataframe with non ascii characters replaced with XXX

---

```
fix.priority_id.by.source
```

*Fix the priority\_id in the toxval table based on source*

---

**Description**

Fix the priority\_id in the toxval table based on source

**Usage**

```
fix.priority_id.by.source(toxval.db, source)
```

**Arguments**

`toxval.db`      The version of toxvaldb to use.

---

```
fix.qc_status.by.source
```

*Fix the qa\_status flag*

---

**Description**

Fix the qa\_status flag

**Usage**

```
fix.qc_status.by.source(toxval.db, source, reset = T)
```

**Arguments**

toxval.db      The version of toxval in which the data is altered.

**Value**

The database will be altered

---

```
fix.risk_assessment_class.all.source
```

*Fix the risk assessment class for all source.*

---

**Description**

Fix the risk assessment class for all source.

**Usage**

```
fix.risk_assessment_class.all.source(toxval.db, restart = T)
```

**Arguments**

toxval.db      The version of toxval in which the data is altered.  
 restart        If TRUE, delete all values and start from scratch

---

```
fix.risk_assessment_class.by.source
```

*Set the risk assessment class of toxval according to an excel dictionary.  
 Values may beset multiple times, so the excel sheet should be ordered  
 so that the last ones to be set are last*

---

**Description**

Set the risk assessment class of toxval according to an excel dictionary. Values may beset multiple times, so the excel sheet should be ordered so that the last ones to be set are last

**Usage**

```
fix.risk_assessment_class.by.source(toxval.db, source, restart = T)
```

**Arguments**

toxval.db      The version of toxval in which the data is altered.  
 source        The source to be updated  
 restart        If TRUE, delete all values and start from scratch

---

`fix.single.param.by.source`*Alter the contents of toxval according to an excel dictionary*

---

**Description**

Alter the contents of toxval according to an excel dictionary

**Usage**

```
fix.single.param.by.source(toxval.db, param, source, ignore = FALSE)
```

**Arguments**

<code>toxval.db</code>	The version of toxval in which the data is altered.
<code>param</code>	The parameter value to be fixed
<code>ignore</code>	If TRUE allow missing values to be ignored

**Value**

The database will be altered

---

`fix.species.v2`*Set the species\_id column in toxval*

---

**Description**

This function replaces fix.species This function precedes toxvaldb.load.species

**Usage**

```
fix.species.v2(toxval.db, source, date_string = "2022-05-25")
```

**Arguments**

<code>toxval.db</code>	The version of the database to use
------------------------	------------------------------------

---

<code>fix.strain.v2</code>	<i>Set the strain information in toxval</i>
----------------------------	---

---

### Description

Set the strain information in toxval

### Usage

```
fix.strain.v2(toxval.db, source, date_string = "2022-05-25")
```

### Arguments

<code>toxval.db</code>	The version of the database to use
------------------------	------------------------------------

---

<code>fix.units.by.source</code>	<i>Do all of the fixes to units</i>
----------------------------------	-------------------------------------

---

### Description

1. All of these steps operate on the `toxval_units` column.
2. Replace variant unit names with standard ones, running `fix.single.param.new.by.source.R`. This fixes issues like variant names for mg/kg-day and uses the dictionary file `dictionary/toxval_units_5.xlsx`
3. Fix special characters in `toxval_units`
4. Fix issues with units containing extra characters for some ECOTOX records
5. Convert units that are multiples of standard ones (e.g. ppb to ppm). This uses the dictionary file `dictionary/toxval_units conversions 2018-09-12.xlsx`
6. Run conversions from molar to mg units, using MW. This uses the dictionary file `dictionary/MW conversions.xlsx`
7. Convert ppm to mg/m3 for inhalation studies. This uses the conversion  $\text{Concentration (mg/m3)} = 0.0409 \times \text{concentration (ppm)} \times \text{molecular weight}$ . See [https://cfpub.epa.gov/ncer\\_abstracts/index.cfm/fuseaction/display/abstract](https://cfpub.epa.gov/ncer_abstracts/index.cfm/fuseaction/display/abstract). This function requires that the DSSTox external `chemical_id` be set
8. Convert ppm to mg/kg-day in toxval according to a species-specific conversion factor for oral exposures. This uses the dictionary file `dictionary/ppm to mgkgday by animal.xlsx`. See: [www10.plala.or.jp/biostatistics/1-3.doc](http://www10.plala.or.jp/biostatistics/1-3.doc). This probably assumes feed rather than water
9. Make sure that eco studies are in mg/L and human health in mg/m3

### Usage

```
fix.units.by.source(toxval.db, source, do.convert.units = F)
```

**Arguments**

toxval.db      The version of toxvaldb to use.  
do.convert.units      If TRUE, so unit conversions, as opposed to just cleaning

---

generate.originals      *Duplicate any columns with '\_original' Set Toxval Defaults*

---

**Description**

Duplicate any columns with '\_original' Set Toxval Defaults

**Usage**

```
generate.originals(toxval.db, mat)
```

**Arguments**

toxval.db      The version of toxval from which to set defaults.  
mat            The matrix of data to be altered

**Value**

The altered input matrix

---

get.cid.list.toxval  
                    *Get chemical ids for many given CASRN/Chemical name pairs*

---

**Description**

Get chemical ids for many given CASRN/Chemical name pairs

**Usage**

```
get.cid.list.toxval(toxval.db, chemical.list, source, verbose = F)
```

**Arguments**

toxval.db      The version of toxval that the chemical id is pulled from.  
chemical.list      A 2-column dataframe of CAS Registry Numbers and chemical names.  
source          The source of the chemical data  
verbose          If TRUE, print out extra diagnostic messages

**Value**

A 3-column dataframe of CAS Registry Numbers, chemical names, and associated chemical IDs.

---

<code>getPSQLErrorConn</code>	<i>Get the names the database server, user, and pass or returns error message</i>
-------------------------------	---

---

**Description**

Get the names the database server, user, and pass or returns error message

**Usage**

```
getPSQLErrorConn()
```

**Value**

print the database connection information

---

<code>hello</code>	<i>Hello, World!</i>
--------------------	----------------------

---

**Description**

Prints 'Hello, world!'.

**Usage**

```
hello()
```

**Examples**

```
hello()
```

---

<code>import.dictionary</code>	<i>import the toxval and toxval_type dictionaries</i>
--------------------------------	---

---

**Description**

import the toxval and toxval\_type dictionaries

**Usage**

```
import.dictionary(toxval.db)
```

**Arguments**

<code>toxval.db</code>	The name of the database
------------------------	--------------------------

---

import.driver	<i>Fncion to run all import scripts</i>
---------------	---

---

**Description**

Fncion to run all import scripts

**Usage**

```
import.driver(  
    db = "res_toxval_source_v5",  
    chem.check.halt = FALSE,  
    do.clean = FALSE  
)
```

**Arguments**

db	The version of toxval_source into which the source is loaded.
indir	The directory where the output file will be placed
infile	The input file ./chiu/chiu_files/Full_RfD_databaseQAed-FINAL.xlsx
chem.check.halt	If TRUE and there are bad chemical names or casrn, stop to look at the results in indir/chemcheck.xlsx

---

import.source.info	<i>Load Source Info into toxval. The information is in the file ./dictionary/source_in_2020_aug_17.xlsx</i>
--------------------	---

---

**Description**

Load Source Info into toxval. The information is in the file ./dictionary/source\_in\_2020\_aug\_17.xlsx

**Usage**

```
import.source.info(toxval.db)
```

**Arguments**

toxval.db	The version of toxval into which the source info is loaded.
-----------	---

---

```
import.source.info.by.source
```

*Load Source Info for each source into toxval The information is in the file ./dictionary/source\_in\_2020\_aug\_17.xlsx*

---

### Description

Load Source Info for each source into toxval The information is in the file ./dictionary/source\_in\_2020\_aug\_17.xlsx

### Usage

```
import.source.info.by.source(toxval.db, source)
```

### Arguments

toxval.db      The version of toxval into which the source info is loaded.

---

```
import_atcdr_pfas_2021_source
```

*Load atcdr pfas 2021 Source into dev\_toxval\_source\_v4.*

---

### Description

Load atcdr pfas 2021 Source into dev\_toxval\_source\_v4.

### Usage

```
import_atcdr_pfas_2021_source(  
  db,  
  indir = "../atcdr_pfas_2021/atcdr_pfas_2021_files",  
  chem.check.halt = F  
)
```

### Arguments

db              The version of toxval into which the source is loaded.

indir           The path for all the input xlsx files ./atcdr\_pfas\_2021/atcdr\_pfas\_2021\_files

---

```
import_atsdr_pfas_source
    Load atsdr pfas Source files into dev_toxval_source_v3.
```

---

## Description

Load atsdr pfas Source files into dev\_toxval\_source\_v3.

## Usage

```
import_atsdr_pfas_source(
    db,
    infile1 = "../atsdr_pfas/atsdr_pfas_files/ATSDR_Perfluoroalkyls_Inhalation.xlsx",
    infile2 = "../atsdr_pfas/atsdr_pfas_files/ATSDR_Perfluoroalkyls_Oral.xlsx",
    infile3 = "../atsdr_pfas/atsdr_pfas_files/ATSDR_PFOA_Inhalation.xlsx",
    infile4 = "../atsdr_pfas/atsdr_pfas_files/ATSDR_PFOA_Oral.xlsx",
    infile5 = "../atsdr_pfas/atsdr_pfas_files/ATSDR_PFOS_Oral.xlsx",
    indir = "../atsdr_pfas/atsdr_pfas_files",
    chem.check.halt = F
)
```

## Arguments

db	The version of toxval into which the source is loaded.
infile1	The input file ./atsdr_pfas/atsdr_pfas_files/ATSDR_Perfluoroalkyls_Inhalation.xlsx
infile2	The input file ./atsdr_pfas/atsdr_pfas_files/ATSDR_Perfluoroalkyls_Oral.xlsx
infile3	The input file ./atsdr_pfas/atsdr_pfas_files/ATSDR_PFOA_Inhalation.xlsx
infile4	The input file ./atsdr_pfas/atsdr_pfas_files/ATSDR_PFOA_Oral.xlsx
infile5	The input file ./atsdr_pfas/atsdr_pfas_files/ATSDR_PFOS_Oral.xlsx

---

```
import_atsdr_source
    Load atsdr Source into dev_toxval_source_v3.
```

---

## Description

Load atsdr Source into dev\_toxval\_source\_v3.

## Usage

```
import_atsdr_source(
    db,
    infile = "ATSDR_MRLs_2020_Sept2020_Temp.xlsx",
    indir = "../atsdr/atsdr_files/",
    chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./atsdr/atsdr_files/ATSDR_MRLs_2020_Sept2020_Temp.xls

---

```
import_caloe_hha_source
```

*Load caloe\_hha Source file into dev\_toxval\_source\_v4. The raw data can be exported as an Excel sheet from the web site <https://oehha.ca.gov/chemicals>, selecting the link "Export database as .CSV file"*

---

**Description**

This method parses that file and prepares for loading into toxval source

**Usage**

```
import_caloe_hha_source(
  db,
  infile = "OEHHA-chemicals_2022-06-22T13-42-44.xlsx",
  chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file
chem.check.halt	If TRUE and there are problems with chemicals CASRN checks, halt the program

---

```
import_chiu_source
```

*Load chiu Source into dev\_toxval\_source\_v3. Data from the Chiu et al. paper on RfD values*

---

**Description**

Load chiu Source into dev\_toxval\_source\_v3. Data from the Chiu et al. paper on RfD values

**Usage**

```
import_chiu_source(
  db,
  indir = "../chiu/chiu_files/",
  infile = "Full_RfD_databaseQAed-FINAL.xlsx",
  chem.check.halt = F
)
```

**Arguments**

db	The version of toxval_source into which the source is loaded.
indir	The directory where the output file will be placed
infile	The input file ./chiu/chiu_files/Full_RfD_databaseQAed-FINAL.xlsx
chem.check.halt	If TRUE and there are bad chemical names or casrn, stop to look at the results in indir/chemcheck.xlsx

---

```
import_copper_source
```

*Load copper manufacturers Source into dev\_toxval\_source\_v4.*

---

**Description**

Load copper manufacturers Source into dev\_toxval\_source\_v4.

**Usage**

```
import_copper_source(  
  db,  
  infile = "../copper/copper_files/Copper Data Entry - Final.xlsx",  
  chem.check.halt = F  
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./copper/copper_files/Copper Data Entry - Final.xlsx

---

```
import_cosmos_source
```

*Load cosmos Source files into dev\_toxval\_source\_v4.*

---

**Description**

Load cosmos Source files into dev\_toxval\_source\_v4.

**Usage**

```
import_cosmos_source(  
  db,  
  infile1 = "../cosmos/cosmos_files/COSMOS_DB_v1_export_2016_04_02_study_data.xlsx",  
  
  infile2 = "../cosmos/cosmos_files/COSMOS_DB_v1_export_2016_04_02_cosmetics_inve",  
  indir = "../cosmos/cosmos_files/",  
  chem.check.halt = F  
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile1	The input file ./cosmos/cosmos_files/COSMOS_DB_v1_export_2016_04_02_study_data.xlsx
infile2	The input file ./cosmos/cosmos_files/COSMOS_DB_v1_export_2016_04_02_cosmetics_inventory.xlsx

---

```
import_dod_ered_source
```

*Load dod Source into dev\_toxval\_source\_v2.*

---

**Description**

Load dod Source into dev\_toxval\_source\_v2.

**Usage**

```
import_dod_ered_source(
  db,
  infile = "../dod/dod_files/USACE_ERDC_ERED_database_12_07_2018.xlsx",
  chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./dod/dod_files/USACE_ERDC_ERED_database_12_07_2018.xlsx

---

```
import_dod_source
```

*Load DOD MEG to toxval\_source. The file to be loaded are in ./dod/dod\_files*

---

**Description**

Load DOD MEG to toxval\_source. The file to be loaded are in ./dod/dod\_files

**Usage**

```
import_dod_source(db, chem.check.halt = F)
```

**Arguments**

db	The version of toxval_source into which the tables are loaded.
----	--

---

```
import_doe_benchmarks_source
```

*Load doe\_benchmarks Source into dev\_toxval\_source\_v2.*

---

### Description

Load doe\_benchmarks Source into dev\_toxval\_source\_v2.

### Usage

```
import_doe_benchmarks_source(  
  db,  
  infile = "../doe_benchmarks/doe_benchmarks_files/DOE_Wildlife_Benchmarks_1996.xlsx",  
  chem.check.halt = F  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile	The input file ./doe_benchmarks/doe_benchmarks_files/DOE_Wildlife_Benchmarks_1996.xlsx

---

```
import_doe_source
```

*Load doe Source into dev\_toxval\_source\_v4.*

---

### Description

Load doe Source into dev\_toxval\_source\_v4.

### Usage

```
import_doe_source(  
  db,  
  infile = "../doe/doe_files/Revision_29.xlsx",  
  chem.check.halt = F  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile	The input file ./doe/doe_files/Revision_29.xlsx

---

```
import_echa_chemportal_api_source
```

*Load ECHA chemportal api Source into dev\_toxval\_source\_v4.*

---

### Description

Load ECHA chemportal api Source into dev\_toxval\_source\_v4.

### Usage

```
import_echa_chemportal_api_source(  
    db,  
    filepath = "../echa_chemportal_api/echa_chemportal_api_files",  
    chem.check.halt = T  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
filepath	The path for all the input xlsx files ./echa_chemportal_api/echa_chemportal_api_files

---

```
import_efsa2_source
```

*Load efsa2 Source into dev\_toxval\_source\_v2.*

---

### Description

Load efsa2 Source into dev\_toxval\_source\_v2.

### Usage

```
import_efsa2_source(  
    db,  
    infile = "../efsa2/efsa2_files/merge2/EFSA_combined_new 2022-07-19.xlsx",  
    chem.check.halt = F  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile	The input file ./efsa2/efsa2_files/merge2/EFSA_combined_new.xlsx

---

`import_efsa_source` *Process the raw excel files downloaded from EFSA version3(March 27 2020) To get the files, go to the web site <https://zenodo.org/record/3693783#.XrsBMmhKjIU>. At the bottom are links to a set of Excel files - download all of them into the next version V3, convert the xlsx files to csv since the xlsx files when read in R converts all symbols/special characters to certain unicode values (space to '\_x0020\_'). while reading the original xlsx files into R it was unsuccessful to convert encoding to UTF-8, also tried converting using stringi. Only workaround was by converting the downloaded files to csv and using the csv files as input source.*

---

### Description

modify the field names at the beginning of this script

### Usage

```
import_efsa_source(db, chem.check.halt = F)
```

### Arguments

`db`                      The version of toxval into which the source is loaded.

### Value

Merged tidy excel file that details the data in EFSA

---

```
import_envirottox_source
```

*Load EnviroTox.V2 Source data into dev\_toxval\_source\_v4.*

---

### Description

Load EnviroTox.V2 Source data into dev\_toxval\_source\_v4.

### Usage

```
import_envirottox_source(  
  db,  
  infile = "../envirottox/envirottox_files/envirottox_taxonomy_clean_casrn.xlsx",  
  chem.check.halt = F  
)
```

**Arguments**

db	The version of toxval into which the source info is loaded.
infile	The input file ./envirotox/envirotox_files/envirotox_taxonomy.xlsx

---

`import_flex_source` *Load the FLEX data (old ACToR data) from files to toxval source. This will load all Excel file in the folder ACToR replacements/*

---

**Description**

Load the FLEX data (old ACToR data) from files to toxval source. This will load all Excel file in the folder ACToR replacements/

**Usage**

```
import_flex_source(  
  db,  
  filepath = "ACToR replacements",  
  verbose = F,  
  chem.check.halt = F,  
  do.clean = F  
)
```

**Arguments**

db	The version of toxval into which the tables are loaded.
filepath	The path for all the input xlsx files ./ACToR replacements
verbose	Whether the loaded rows should be printed to the console.
chem.check.halt	If TRUE and there are problems with chemicals CASRN checks, halt the program

---

`import_hawc_pfas_150_source` *Load HAWC PFAS 150 Source into dev\_toxval\_source\_v4.*

---

**Description**

Load HAWC PFAS 150 Source into dev\_toxval\_source\_v4.

**Usage**

```
import_hawc_pfas_150_source(
    db,
    infile1 = "../hawc_pfas_150/hawc_pfas_files/hawc_pfas_150_raw3.xlsx",
    infile2 = "../hawc_pfas_150/hawc_pfas_files/hawc_pfas_150_doses3.xlsx",
    infile3 = "../hawc_pfas_150/hawc_pfas_files/hawc_pfas_150_groups3.xlsx",
    chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile1	The input file ./hawc_pfas/hawc_pfas_files/hawc_pfas_150_raw3.xlsx , extracted from <a href="https://hawcprd.epa.gov">https://hawcprd.epa.gov</a> , assessment name - PFAS 150 (2021) and assessment id - 100500085. Data extraction using HawcClient and extraction script hawc_pfas_150.py
infile2	The input file ./hawc_pfas/hawc_pfas_files/hawc_pfas_150_doses3.xlsx
infile3	The input file ./hawc_pfas/hawc_pfas_files/hawc_pfas_150_groups3.xlsx

---

```
import_hawc_pfas_430_source
```

*Load HAWC PFAS 430 Source into dev\_toxval\_source\_v4.*

---

**Description**

Load HAWC PFAS 430 Source into dev\_toxval\_source\_v4.

**Usage**

```
import_hawc_pfas_430_source(
    db,
    infile1 = "../hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_raw3.xlsx",
    infile2 = "../hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_doses3.xlsx",
    infile3 = "../hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_groups3.xlsx",
    chem.check.halt = T
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile1	The input file ./hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_raw3.xlsx , extracted from <a href="https://hawcprd.epa.gov">https://hawcprd.epa.gov</a> , assessment name - PFAS 430 (2020) and assessment id - 100500256. Data extraction using HawcClient and extraction script hawc_pfas_430.py
infile2	The input file ./hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_doses3.xlsx
infile3	The input file ./hawc_pfas_430/hawc_pfas_430_files/hawc_pfas_430_groups3.xlsx

---

```
import_hawc_source Load HAWC Source into dev_toxval_source_v3.
```

---

### Description

Note that the different tabs in the input sheet have different names, so these need to be adjusted manually for the code to work. This is a problem with how the data is stored in HAWC

### Usage

```
import_hawc_source(
  db,
  infile1 = "hawc_original_12_06_21.xlsx",
  infile2 = "dose_dict.xlsx",
  chem.check.halt = T
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile1	The input file ./hawc/hawc_files/hawc_original_12_06_21.xlsx
infile2	The input file ./hawc/hawc_files/dose_dict.xlsx

---

```
import_health_canada_source
Load health_canada Source Info into dev_toxval_source_v2.
```

---

### Description

Load health\_canada Source Info into dev\_toxval\_source\_v2.

### Usage

```
import_health_canada_source(
  db,

  infile = "../health_canada/health_canada_files/HealthCanada_TRVs_2010_AppendixA
  chem.check.halt = T
)
```

### Arguments

db	The version of toxval into which the source info is loaded.
infile	The input file ./health_canada/health_canada_files/HealthCanada_TRVs_2010_AppendixA v2.xlsx

---

```
import_heast_source
```

*Load heast Source into dev\_toxval\_source\_v2.*

---

### Description

Load heast Source into dev\_toxval\_source\_v2.

### Usage

```
import_heast_source(  
    db,  
    infile = "../heast/heast_files/EPA_HEAST_Table1_ORNL_for_loading.xlsx",  
    chem.check.halt = T  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile	The input file ./heast/heast_files/EPA_HEAST_Table1_ORNL_for_loading.xlsx

---

```
import_hess_source
```

*Load hess Source into dev\_toxval\_source\_v3.*

---

### Description

Load hess Source into dev\_toxval\_source\_v3.

### Usage

```
import_hess_source(  
    db,  
    infile1 = "../hess/hess_files/hess_6_16_21.xlsx",  
    infile2 = "../hess/hess_files/hess_record_urls_from_clowder.xlsx",  
    chem.check.halt = T  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile1	The input file ./hess/hess_files/hess_6_16_21.csv, extracted by Risa Sayre(SCDCD)
infile2	The input file ./hess/hess_files/hess_record_urls_from_clowder.xlsx

---

```
import_hpvis_source
```

*Load hpvis Source Info into dev\_toxval\_source\_v2.*

---

## Description

Load hpvis Source Info into dev\_toxval\_source\_v2.

## Usage

```
import_hpvis_source(db, filepath = "../hpvis/hpvis_files", chem.check.halt = T)
```

## Arguments

db	The version of toxval into which the source info is loaded.
filepath	The path for all the input xlsx files ./hpvis/hpvis_files

---

```
import_iris_source Load IRIS Source into dev_toxval_source_v4.
```

---

## Description

Load IRIS Source into dev\_toxval\_source\_v4.

## Usage

```
import_iris_source(
  db,
  infile1 = "../iris/iris_files/IRIS_non_cancer_clean 2020-05-27.xlsx",
  infile2 = "../iris/iris_files/IRIS_cancer_clean 2020-05-27.xlsx",
  chem.check.halt = T
)
```

## Arguments

db	The version of toxval into which the source is loaded.
infile1	The input file ./iris/iris_files/IRIS_non_cancer_clean 2020-05-27.xlsx
infile2	The input file ./iris/iris_files/IRIS_cancer_clean 2020-05-27.xlsx

---

```
import_lanl_source Load lanl Source into dev_toxval_source_v2.
```

---

**Description**

Load lanl Source into dev\_toxval\_source\_v2.

**Usage**

```
import_lanl_source(  
    db,  
    infile = "../lanl/lanl_files/ESLs_R3.3.xlsx",  
    chem.check.halt = T  
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./lanl/lanl_files/ESLs_R3.3.xlsx

---

```
import_niosh_source  
    Load niosh Source into dev_toxval_source_v4.
```

---

**Description**

Load niosh Source into dev\_toxval\_source\_v4.

**Usage**

```
import_niosh_source(db, infile = "niosh_IDLH_2020.xlsx", chem.check.halt = T)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./niosh/niosh_files/niosh_IDLH_2020.xlsx

---

import\_oppt\_source *Load oppt Source Info into dev\_toxval\_source\_v2.*

---

### Description

Load oppt Source Info into dev\_toxval\_source\_v2.

### Usage

```
import_oppt_source(  
    db,  
    infile = "../oppt/oppt_files/OPPT_data_20181219.xlsx",  
    chem.check.halt = T  
)
```

### Arguments

db	The version of toxval into which the source info is loaded.
infile	The input file ./oppt/oppt_files/OPPT_data_20181219.xlsx

---

import\_opp\_source *Load opp Source into dev\_toxval\_source\_v2.*

---

### Description

Load opp Source into dev\_toxval\_source\_v2.

### Usage

```
import_opp_source(  
    db,  
    infile = "../opp/opp_files/OPP RfD.xlsx",  
    chem.check.halt = T  
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile	The input file ./opp/opp_files/OPP RfD.xlsx

---

`import_penn_source` *Load penn Source into dev\_toxval\_source\_v2.*

---

### Description

Load penn Source into dev\_toxval\_source\_v2.

### Usage

```
import_penn_source(  
    db,  
    infile = "../penn/penn_files/Penn DEP Table 5a.xlsx",  
    chem.check.halt = T  
)
```

### Arguments

<code>db</code>	The version of toxval into which the source is loaded.
<code>infile</code>	The input file ./penn/penn_files/Penn DEP Table 5a.xlsx

---

`import_pfas_150_sem_source`  
*Load PFAS 150 SEM Source data into dev\_toxval\_source\_v2.*

---

### Description

Load PFAS 150 SEM Source data into dev\_toxval\_source\_v2.

### Usage

```
import_pfas_150_sem_source(  
    db,  
  
    infile = "../PFAS 150 SEM/PFAS 150 SEM_files/PFAS150 animal study template combined_clearance with DTXSID and CASRN.xlsx",  
    chem.check.halt = F  
)
```

### Arguments

<code>db</code>	The version of toxval into which the source info is loaded.
<code>infile</code>	The input file ./PFAS 150 SEM/PFAS 150 SEM_files/PFAS150 animal study template combined_clearance with DTXSID and CASRN.xlsx

---

```
import_pfas_summary_pods_source
    Load PFAS Summary PODs into dev_toxval_source_v2.
```

---

### Description

Load PFAS Summary PODs into dev\_toxval\_source\_v2.

### Usage

```
import_pfas_summary_pods_source (
    db,

    infile1 = "../PFAS Summary PODs/PFAS Summary PODs_files/PFAS 150 Study Level PODs_061920.xlsx",
    infile2 = "../PFAS Summary PODs/PFAS Summary PODs_files/CompToxChemicalsDashboard-Batch-Search_2020-07-20_17_18_42.xls",
    chem.check.halt = T
)
```

### Arguments

db	The version of toxval into which the source is loaded.
infile1	The input file ../PFAS Summary PODs/PFAS Summary PODs_files/PFAS 150 Study Level PODs_061920.xlsx
infile2	The input file ../PFAS Summary PODs/PFAS Summary PODs_files/CompToxChemicalsDashboard-Batch-Search_2020-07-20_17_18_42.xls

---

```
import_pprtv_ncea_source
    Load pprtv_ncea Source Info into dev_toxval_source_v2.
```

---

### Description

Load pprtv\_ncea Source Info into dev\_toxval\_source\_v2.

### Usage

```
import_pprtv_ncea_source (
    db,
    filepath = "../pprtv_ncea/pprtv_ncea_files",
    csvfile = "../pprtv_ncea/pprtv_ncea_files/dose_reg2.csv",
    scrapepath = "../pprtv_ncea/PPRTV_scrape2020-04-08.xlsx",
    chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source info is loaded.
filepath	The path for all the input xlsx files ./pprtv_ncea/pprtv_ncea_files
csvfile	The input csv file ./pprtv_ncea/pprtv_ncea_files/dose_reg2.csv
scrapepath	The path for new_pprtv_ncea_scrape_table file ./pprtv_ncea/PPRTV_scrape2020-04-08.xlsx

---

```
import_pprtv_ornl_source
```

*Load pprtv\_ornl Source into dev\_toxval\_source\_v2.*

---

**Description**

Load pprtv\_ornl Source into dev\_toxval\_source\_v2.

**Usage**

```
import_pprtv_ornl_source (
  db,
  infile = "../pprtv_ornl/pprtv_ornl_files/new_PPRTV_ORNL_cancer_noncancer.xlsx",
  chem.check.halt = F
)
```

**Arguments**

db	The version of toxval into which the source is loaded.
infile	The input file ./pprtv_ornl/pprtv_ornl_files/new_PPRTV_ORNL_cancer_noncancer.xlsx

---

```
import_rsl_source
```

*Load rsl Source Info into dev\_toxval\_source\_v2.*

---

**Description**

Load rsl Source Info into dev\_toxval\_source\_v2.

**Usage**

```
import_rsl_source (
  db,
  infile1a = "../rsl/rsl_files/final_rsl_thq_combined_nov21.xlsx",
  infile1b = "../rsl/rsl_files/final_rsl_subchronic_nov21.xlsx",
  infile2 = "../rsl/rsl_files/general_info_nov_21.xlsx",
  infile3 = "../rsl/rsl_files/key_description_nov_21.xlsx",
  chem.check.halt = T
)
```

**Arguments**

db	The version of toxval into which the source info is loaded.
infile1a	The input file ./rsl/rsl_files/final_rsl_thq_combined_nov21.xlsx
infile1b	The input file ./rsl/rsl_files/final_rsl_subchronic_nov21.xlsx
infile2	The input file ./rsl/rsl_files/general_info_nov_21.xlsx
infile3	The input file ./rsl/rsl_files/key_description_nov_21.xlsx

---

import\_test\_source *Load test Source data into dev\_toxval\_source\_v4.*

---

**Description**

Load test Source data into dev\_toxval\_source\_v4.

**Usage**

```
import_test_source(
  db,
  infile1 = "../test/test_files/TEST data.xlsx",
  infile2 = "../test/test_files/test_chemicals_invitrodb.csv",
  chem.check.halt = T
)
```

**Arguments**

db	The version of toxval into which the source info is loaded.
infile1	The input file ./test/test_files/TEST data.xlsx
infile2	The input file ./test/test_files/test_chemicals_invitrodb.csv to map casrn to names from prod_internal_invitrodb_v3_2.chemical

---

import\_wignall\_source  
*Load wignall Source data into dev\_toxval\_source\_v2.*

---

**Description**

Load wignall Source data into dev\_toxval\_source\_v2.

**Usage**

```
import_wignall_source(
  db,

  infile = "../wignall/wignall_files/BMD_Results_2014-06-17_reviewed Mar 2018 par
  chem.check.halt = T
)
```

**Arguments**

db	The version of toxval into which the source info is loaded.
infile	The input file ./wignall/wignall_files/BMD_Results_2014-06-17_reviewed Mar 2018.xlsx

---

load.dsstox	<i>Load DSSTox if needed</i>
-------------	------------------------------

---

**Description**

Load DSSTox if needed

**Usage**

```
load.dsstox()
```

**Arguments**

toxval.db	The version of toxvaldb to use.
source.db	The source database version
source	The source to update for
verbose	If TRUE, print out extra diagnostic messages

---

log_message	<i>Function to combine output log with output message</i>
-------------	---

---

**Description**

Function to combine output log with output message

**Usage**

```
log_message(log_df, message_df_col)
```

---

<code>pfas.by.source</code>	<i>Get the sources with PFAS data</i>
-----------------------------	---------------------------------------

---

### Description

Get the sources with PFAS data

### Usage

```
pfas.by.source(db)
```

### Arguments

<code>db</code>	The version of toxval into which the source is loaded.
<code>infile</code>	The input file <code>./pprtv_ornl/pprtv_ornl_files/new_PPRTV_ORNL_cancer_noncancer.xlsx</code>

---

<code>printCurrentFunction</code>	<i>Print the name of the current function</i>
-----------------------------------	---

---

### Description

Print the name of the current function

### Usage

```
printCurrentFunction(comment.string = NA)
```

### Arguments

<code>comment.string</code>	An optional string to be printed
-----------------------------	----------------------------------

---

runInsert	<i>Insert a record into a database. if auto.increment=TRUE, return the auto incremented primary key of the record. otherwise, return -1</i>
-----------	---

---

**Description**

Insert a record into a database. if auto.increment=TRUE, return the auto incremented primary key of the record. otherwise, return -1

**Usage**

```
runInsert(query, db, do.halt = F, verbose = F, auto.increment.id = F)
```

**Arguments**

query	a properly formatted SQL query as a string
db	the name of the database
do.halt	if TRUE, halt on errors or warnings
verbose	if TRUE, print diagnostic information
auto.increment	if TRUE, add the auto increment primary key even if not part of the query

**Value**

Returns the database table auto incremented primary key ID

---

runInsertTable	<i>Inserts multiple rows into a database table</i>
----------------	--

---

**Description**

Inserts multiple rows into a database table

**Usage**

```
runInsertTable(mat, table, db, do.halt = T, verbose = F, get.id = T)
```

**Arguments**

mat	data frame containing the data, with the column names corresponding
table	name of the database table to which data will be inserted
db	the name of the database
do.halt	if TRUE, halt on errors or warnings
verbose	if TRUE, print diagnostic information

---

`runQuery`*Runs a database query and returns a result set*

---

**Description**

Runs a database query and returns a result set

**Usage**

```
runQuery(query, db, do.halt = T, verbose = F)
```

**Arguments**

<code>query</code>	a properly formatted SQL query as a string
<code>db</code>	the name of the database
<code>do.halt</code>	if TRUE, halt on errors or warnings
<code>verbose</code>	if TRUE, print diagnostic information

---

`runQuery_psql`*Runs a PSQL database query and returns a result set*

---

**Description**

Runs a PSQL database query and returns a result set

**Usage**

```
runQuery_psql(query, db, do.halt = T, verbose = T)
```

**Arguments**

<code>query</code>	a properly formatted SQL query as a string
<code>db</code>	the name of the database
<code>do.halt</code>	if TRUE, halt on errors or warnings
<code>verbose</code>	if TRUE, print diagnostic information

---

setDBConn	<i>set SQL connection to the database</i>
-----------	---

---

**Description**

set SQL connection to the database

**Usage**

```
setDBConn(server = "ccte-mysql-res.epa.gov", user, password)
```

**Arguments**

server	SQL server on which relevant database lives
user	SQL username to access database
password	SQL password corresponding to username

---

setPSQldbConn	<i>set PSQL connection to the database</i>
---------------	--

---

**Description**

set PSQL connection to the database

**Usage**

```
setPSQldbConn(server, port, user, password)
```

**Arguments**

server	SQL server on which relevant database lives
user	SQL username to access database
password	SQL password corresponding to username

---

set_clowder_id	<i>Set the clowder_id and document_name in res</i>
----------------	--

---

**Description**

Set the clowder\_id and document\_name in res

**Usage**

```
set_clowder_id(res, source)
```

**Arguments**

res	The input dataframe
source	The data source name

**Value**

Returns the input dataframe with defaults set

---

source.size	<i>print out the dize of each of the tables</i>
-------------	---

---

**Description**

print out the dize of each of the tables

**Usage**

```
source.size(db = "res_toxval_source_v5")
```

**Arguments**

db	The version of toxval_source into which the source is loaded.
indir	The directory where the output file will be placed
infile	The input file ./chiu/chiu_files/Full_RfD_databaseQAed-FINAL.xlsx
chem.chek.halt	If TRUE and there are bad chemical names or casrn, stop to look at the results in indir/chemcheck.xlsx

---

```
source_chemical.duplicates
```

*Find duplicated chemicals in the source\_chemical table. This will help get rid of records that have been repalced*

---

### Description

Find duplicated chemicals in the source\_chemical table. This will help get rid of records that have been repalced

### Usage

```
source_chemical.duplicates(db)
```

### Arguments

db	The version of toxval into which the tables are loaded.
----	---

---

```
source_chemical.ecotox
```

*special process to deal with source chemicals for ECOTOX*

---

### Description

special process to deal with source chemicals for ECOTOX

### Usage

```
source_chemical.ecotox(  
  toxval.db,  
  source.db,  
  res,  
  source,  
  chem.check.halt = FALSE,  
  casrn.col = "casrn",  
  name.col = "name",  
  verbose = F  
)
```

### Arguments

toxval.db	The version of toxval into which the source info is loaded.
source.db	The source database version
chem.check.halt	If TRUE, halt if there are errors in the chemical checking

casrn.col	Name of the column containing the CASRN
name.col	Name of the column containing chemical names
verbose	If TRUE, output extra diagnostics information

---

```
source_chemical.process
```

*Deal with the process of making the source\_chemical information*

---

## Description

Deal with the process of making the source\_chemical information

## Usage

```
source_chemical.process (
  db,
  res,
  source,
  chem.check.halt = FALSE,
  casrn.col = "casrn",
  name.col = "name",
  verbose = F
)
```

## Arguments

db	The version of toxval into which the source info is loaded.
infile1	The input file ./test/test_files/TEST data.xlsx
infile2	The input file ./test/test_files/test_chemicals_invitrodb.csv to map casrn to names from prod_internal_invitrodb_v3_2.chemical

---

```
source_chemical.toxrefdb
```

*Special process to deal with source chemicals for ToxRefDB. This will put the chemicals into the source database source\_chemical table*

---

## Description

Special process to deal with source chemicals for ToxRefDB. This will put the chemicals into the source database source\_chemical table

**Usage**

```
source_chemical.toxrefdb(
  toxval.db,
  source.db,
  res,
  source = "ToxRefDB",
  chem.check.halt = FALSE,
  casrn.col = "casrn",
  name.col = "name",
  verbose = F
)
```

**Arguments**

toxval.db	The version of toxval into which the source info is loaded.
source.db	The source database version
res	The dataframe to which the chemical_id will be added
source	The name of the source
chem.check.halt	If TRUE, stop if there are problems with the chemical mapping
name.col	The name of the column containing the chemical name
verbose	If TRUE, write out diagnostic messages
casrn.col	The name of the column containing the CASRN

**Value**

Returns the input dataframe with the chemical\_id added

---

```
source_prep_and_load
```

*Prep the source data and load*

---

**Description**

Prep the source data and load

**Usage**

```
source_prep_and_load(
  db,
  source,
  table,
  res,
  do.reset = FALSE,
  do.insert = FALSE,
  chem.check.halt = FALSE
)
```

**Arguments**

<code>db</code>	The version of toxval_source into which the source is loaded.
<code>source</code>	Name of the source
<code>table</code>	Name of the database table
<code>res</code>	The data frame to be processed
<code>do.reset</code>	If TRUE, delete data from the database for this source before inserting new data. Default FALSE
<code>do.insert</code>	If TRUE, insert data into the database, default TRUE
<code>chem.check.halt</code>	If TRUE, stop the execution if there are errors in the chemical mapping

---

`source_set_defaults`

*Set default value for NAs - jsut set NA to "-" for columns of type character*

---

**Description**

Set default value for NAs - jsut set NA to "-" for columns of type character

**Usage**

```
source_set_defaults(res, source)
```

**Arguments**

<code>res</code>	The input dataframe
<code>source</code>	The data source name

**Value**

Returns the input dataframe with defaults set

---

<code>species.mapper</code>	<i>Map the species to the ECOTOX species dictionary and export the missing species to add to the dictionary</i>
-----------------------------	---

---

### Description

This function replaces `fix.species` This function precedes `toxvaldb.load.species`

### Usage

```
species.mapper(toxval.db, date_string = "2022-02-23")
```

### Arguments

<code>toxval.db</code>	The version of the database to use
------------------------	------------------------------------

---

<code>toxval.check.source_chemical</code>	<i>Check the status of the source_chemical tables</i>
---	---

---

### Description

Check the status of the source\_chemical tables

### Usage

```
toxval.check.source_chemical(toxval.db, source.db)
```

### Arguments

<code>toxval.db</code>	The version of toxvaldb to use.
<code>source.db</code>	The vsource database version

---

<code>toxval.config</code>	<i>Define a set of global variables. These include the source path (datapath) and the source databases (e.g. <code>dev_toxval_version</code> and <code>dev_toxval_source_version</code>) and the urls for the ACToR web services.</i>
----------------------------	---

---

### Description

Define a set of global variables. These include the source path (datapath) and the source databases (e.g. `dev_toxval_version` and `dev_toxval_source_version`) and the urls for the ACToR web services.

### Usage

```
toxval.config()
```

### Value

Returns a set of parameters to be used throughout the package

---

<code>toxval.init.db</code>	<i>Initialize the database</i>
-----------------------------	--------------------------------

---

### Description

Initialize the database

### Usage

```
toxval.init.db(toxval.db, reset = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
------------------------	---

---

```
toxval.load.alaska_dec
```

*Load the alaska\_dec (old ACToR - flex) data from toxval sourcedb to toxval*

---

## Description

Load the alaska\_dec (old ACToR - flex) data from toxval sourcedb to toxval

## Usage

```
toxval.load.alaska_dec(toxval.db, source.db, log = F)
```

## Arguments

toxval.db	The database version to use
source.db	The source database
log	If TRUE, output log information to a file

---

```
toxval.load.all
```

*Load and process all information into ToxValDB. The entire process can be run with one command: toxval.load.all(toxval.db=...,source.db=..., do.all=T) It can also be run in stages, but needs to be run in the order of the do.X parameters listed here. If any earlier step is run, all of the subsequent steps need to be rerun.*

---

## Description

Load and process all information into ToxValDB. The entire process can be run with one command: toxval.load.all(toxval.db=...,source.db=..., do.all=T) It can also be run in stages, but needs to be run in the order of the do.X parameters listed here. If any earlier step is run, all of the subsequent steps need to be rerun.

## Usage

```
toxval.load.all(
  toxval.db,
  source.db,
  log = F,
  do.init = F,
  do.reset = F,
  do.load = F
)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxvalsource database from which information is pulled.
log	If TRUE write the output from each load script to a log file
do.init	If True, clean out all of the database tables
do.reset	If TRUE, empty the database to restart
do.load	If TRUE, load all of the source

---

```
toxval.load.atsdr  Load atsdr from toxval_source to toxval
```

---

**Description**

Load atsdr from toxval\_source to toxval

**Usage**

```
toxval.load.atsdr(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.atsdr.pfas
Load new_atsdr_pfas from toxval_source to toxval
```

---

**Description**

Load new\_atsdr\_pfas from toxval\_source to toxval

**Usage**

```
toxval.load.atsdr.pfas(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.atsdr.pfas.2021
```

*Load new\_atsdr\_pfas\_2021 from toxval\_source to toxval*

---

**Description**

Load new\_atsdr\_pfas\_2021 from toxval\_source to toxval

**Usage**

```
toxval.load.atsdr.pfas.2021(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
log	If TRUE, send messages to a log file

---

```
toxval.load.bcfbaf
```

*Load the Arnot BAF / BCF data*

---

**Description**

Load the Arnot BAF / BCF data

**Usage**

```
toxval.load.bcfbaf(toxval.db, verbose = F)
```

**Arguments**

verbose	If TRUE, print out extra diagnostic messages
source.db	The source database to use.

---

```
toxval.load.caloeaha
```

*Load new\_caloeaha from toxval\_source to toxval*

---

### Description

Load new\_caloeaha from toxval\_source to toxval

### Usage

```
toxval.load.caloeaha(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
log	If TRUE, send output to a log file

---

```
toxval.load.cal_dph
```

*Load the cal\_dph (old ACToR - flex)data from toxval sourcedb to toxval*

---

### Description

Load the cal\_dph (old ACToR - flex)data from toxval sourcedb to toxval

### Usage

```
toxval.load.cal_dph(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.cancer prepare the cancer call data. The data comes form a series of files  
                  ../NIOSH/NIOSH_CARC_2018.xlsx ../IRIS/iris_cancer_call_2018-  
                  10-03.xlsx ../PPRTV_ORNL/PPRTV_ORNL cancer calls 2018-10-  
                  25.xlsx ../cancer_summary/cancer/NTP/NTP cancer clean.xlsx ../can-  
                  cancer_summary/cancer/IARC/IARC cancer 2018-10-29.xlsx ../can-  
                  cancer_summary/cancer/HealthCanada/HealthCanada_TRVs_2010_AppendixA  
                  v2.xlsx ../cancer_summary/cancer/EPA_OPP_CARC/EPA_CARC.xlsx  
                  ../cancer_summary/cancer/CalEPA/calepa_p65_cancer_only.xlsx
```

---

### Description

extract all of the chemicals with cancer slope factor or unit risk with appropriate units

### Usage

```
toxval.load.cancer(toxval.db)
```

### Arguments

toxval.db	The version of the database to use
-----------	------------------------------------

---

```
toxval.load.chiu Load new_chiu from toxval_source to toxval
```

---

### Description

Load new\_chiu from toxval\_source to toxval

### Usage

```
toxval.load.chiu(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

`toxval.load.copper` *Load new\_copper\_table from toxval\_source to toxval*

---

### Description

Load new\_copper\_table from toxval\_source to toxval

### Usage

```
toxval.load.copper(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	If TRUE, print out extra diagnostic messages

---

`toxval.load.cosmos` *Load cosmos from source to toxval*

---

### Description

Load cosmos from source to toxval

### Usage

```
toxval.load.cosmos(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	If TRUE, print out extra diagnostic messages

---

toxval.load.dod	<i>Load DOD from toxval_source to toxval</i>
-----------------	--

---

**Description**

Load DOD from toxval\_source to toxval

**Usage**

```
toxval.load.dod(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

toxval.load.dod.ered	<i>Load new_dod_table from toxval_source to toxval</i>
----------------------	--

---

**Description**

Load new\_dod\_table from toxval\_source to toxval

**Usage**

```
toxval.load.dod.ered(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.doe.benchmarks
```

*Load new\_doe\_table and new\_doe\_benchmarks\_table from toxval\_source to toxval*

---

### Description

Load new\_doe\_table and new\_doe\_benchmarks\_table from toxval\_source to toxval

### Usage

```
toxval.load.doe.benchmarks(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.doe.ecorisk
```

*Load new\_lanl\_table from toxval\_source to toxval*

---

### Description

Load new\_lanl\_table from toxval\_source to toxval

### Usage

```
toxval.load.doe.ecorisk(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.doe.pac
```

*Load new\_doe\_table and new\_doe\_benchmarks\_table from toxval\_source to toxval*

---

### Description

Load new\_doe\_table and new\_doe\_benchmarks\_table from toxval\_source to toxval

### Usage

```
toxval.load.doe.pac(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.echa
```

*Load ECHA from toxval\_source to toxval*

---

### Description

Load ECHA from toxval\_source to toxval

### Usage

```
toxval.load.echa(toxval.db, source.db, verbose = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.echa.echemportal
```

*Load ECHA echemportal 2020 (new\_echa) from toxval\_source to toxval*

---

### Description

Load ECHA echemportal 2020 (new\_echa) from toxval\_source to toxval

### Usage

```
toxval.load.echa.echemportal(toxval.db, source.db, verbose = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.echa.echemportal.api
```

*Load echa\_echemportal\_api from toxval\_source to toxval*

---

### Description

Load echa\_echemportal\_api from toxval\_source to toxval

### Usage

```
toxval.load.echa.echemportal.api(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

`toxval.load.echa.iuclid`*Load ECHA IUCLID data from source*

---

**Description**

Load ECHA IUCLID data from source

**Usage**

```
toxval.load.echa.iuclid(toxval.db, source.db, verbose = T)
```

**Arguments**

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>verbose</code>	Whether the loaded rows should be printed to the console.
<code>to.file</code>	If TRUE, output the data to a file for QC
<code>do.read</code>	If TRUE read in the data file and store in a global

---

`toxval.load.echa3` *Load new\_echa3 from toxval\_source to toxval*

---

**Description**

Load new\_echa3 from toxval\_source to toxval

**Usage**

```
toxval.load.echa3(toxval.db, source.db, verbose = F)
```

**Arguments**

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	Whether the loaded rows should be printed to the console.

---

`toxval.load.ecotox` *Load ECOTOX from toxval\_source to toxval*

---

### Description

Load ECOTOX from toxval\_source to toxval

### Usage

```
toxval.load.ecotox(toxval.db, source.db, log = F, do.load = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>do.load</code>	If TRUE, load the data from the input file and put into a global variable
<code>verbose</code>	Whether the loaded rows should be printed to the console.

---

`toxval.load.efsa` *Load new\_efsa from toxval\_source to toxval*

---

### Description

Load new\_efsa from toxval\_source to toxval

### Usage

```
toxval.load.efsa(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	Whether the loaded rows should be printed to the console.

---

```
toxval.load.efsa2
```

*Load new\_efsa2 from toxval\_source to toxval*

---

**Description**

Load new\_efsa2 from toxval\_source to toxval

**Usage**

```
toxval.load.efsa2(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database from which data should be loaded
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.envirottox
```

*Load original\_envirottox from toxval\_source to toxval*

---

**Description**

Load original\_envirottox from toxval\_source to toxval

**Usage**

```
toxval.load.envirottox(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.epa_aegl
```

*Load the epa\_aegl (old ACToR - flex) data from toxval sourcedb to toxval*

---

### Description

Load the epa\_aegl (old ACToR - flex) data from toxval sourcedb to toxval

### Usage

```
toxval.load.epa_aegl(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.fda_cedi
```

*Load the fda\_cedi (old ACToR - flex) data from toxval sourcedb to toxval*

---

### Description

Load the fda\_cedi (old ACToR - flex) data from toxval sourcedb to toxval

### Usage

```
toxval.load.fda_cedi(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

`toxval.load.generic`*Generic structure for loading to toxval from toxval\_source*

---

**Description**

Generic structure for loading to toxval from toxval\_source

**Usage**

```
toxval.load.generic(toxvaldb, source.db, log = F)
```

**Arguments**

<code>source.db</code>	The source database
<code>toxval.db</code>	The database version to use
<code>verbose</code>	If TRUE, output extra debug information

---

`toxval.load.genetox`*Load the Genetox data from Grace*

---

**Description**

Load the Genetox data from Grace

**Usage**

```
toxval.load.genetox(toxval.db, verbose = F, do.read = T)
```

**Arguments**

<code>toxval.db</code>	The database to use.
<code>verbose</code>	If TRUE output debug information
<code>do.read</code>	If TRUE, read in the DSSTox file

---

```
toxval.load.genetox_details
```

*Load the Genetox data from Grace*

---

### Description

Load the Genetox data from Grace

### Usage

```
toxval.load.genetox_details(toxval.db, verbose = F)
```

### Arguments

<code>toxval.db</code>	The database to use.
<code>verbose</code>	if TRUE output debug information

---

```
toxval.load.hawc
```

*Load HAWC from toxval\_source to toxval*

---

### Description

Load HAWC from toxval\_source to toxval

### Usage

```
toxval.load.hawc(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The version of toxval_source from which the tables are loaded.
<code>verbose</code>	If TRUE, output extra debug information

---

```
toxval.load.hawc_pfas_150
```

*Load HAWC PFAS 150 from toxval\_source to toxval*

---

**Description**

Load HAWC PFAS 150 from toxval\_source to toxval

**Usage**

```
toxval.load.hawc_pfas_150(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	If TRUE, output extra debug information

---

```
toxval.load.hawc_pfas_430
```

*Load HAWC PFAS 430 from toxval\_source to toxval*

---

**Description**

Load HAWC PFAS 430 from toxval\_source to toxval

**Usage**

```
toxval.load.hawc_pfas_430(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	If TRUE, output extra debug information

---

```
toxval.load.healthcanada
```

*Load new\_health\_canada\_table from toxval\_source to toxval*

---

### Description

Load new\_health\_canada\_table from toxval\_source to toxval

### Usage

```
toxval.load.healthcanada(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.heart
```

*Load new\_heart\_table and new\_heart\_rfd\_rfc\_table from toxval\_source to toxval*

---

### Description

Load new\_heart\_table and new\_heart\_rfd\_rfc\_table from toxval\_source to toxval

### Usage

```
toxval.load.heart(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

toxval.load.hess	<i>Load hess from toxval_source to toxval</i>
------------------	---

---

**Description**

Load hess from toxval\_source to toxval

**Usage**

```
toxval.load.hess(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

toxval.load.hpvis	<i>Load HPVIS from toxval_source to toxval</i>
-------------------	--

---

**Description**

Load HPVIS from toxval\_source to toxval

**Usage**

```
toxval.load.hpvis(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database from which data should be loaded
verbose	If TRUE, print out extra diagnostic messages

---

<code>toxval.load.iris</code>	<i>Load new_iris_noncancer and new_iris_cancer from toxval_source to toxval</i>
-------------------------------	---

---

### Description

Load new\_iris\_noncancer and new\_iris\_cancer from toxval\_source to toxval

### Usage

```
toxval.load.iris(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	If TRUE, print out extra diagnostic messages

---

<code>toxval.load.mass_mmcl</code>	<i>Load the mass_mmcl (old ACToR - flex)data from toxval sourcedb to toxval</i>
------------------------------------	---

---

### Description

Load the mass\_mmcl (old ACToR - flex)data from toxval sourcedb to toxval

### Usage

```
toxval.load.mass_mmcl(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The database version to use
<code>source.db</code>	The source database
<code>verbose</code>	If TRUE, output extra debug information

---

```
toxval.load.new_ecotox
```

*Load ecotox data from datahub to toxval*

---

**Description**

Load ecotox data from datahub to toxval

**Usage**

```
toxval.load.new_ecotox(toxval.db, verbose = T)
```

**Arguments**

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>verbose</code>	Whether the loaded rows should be printed to the console.

---

```
toxval.load.niosh
```

*Load NIOSH from toxval\_source to toxval*

---

**Description**

Load NIOSH from toxval\_source to toxval

**Usage**

```
toxval.load.niosh(toxval.db, source.db, log = F)
```

**Arguments**

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>log</code>	If TRUE, send output to a log file

---

toxval.load.opp	<i>Load opp from toxval_source to toxval</i>
-----------------	--

---

**Description**

Load opp from toxval\_source to toxval

**Usage**

```
toxval.load.opp(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	If TRUE, print out extra diagnostic messages

---

toxval.load.oppt	<i>Load new_oppt_table from toxval_source to toxval</i>
------------------	---

---

**Description**

Load new\_oppt\_table from toxval\_source to toxval

**Usage**

```
toxval.load.oppt(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.osha_air_limits
```

*Load the osha\_air\_limits (old ACToR - flex) data from toxval sourcedb to toxval*

---

### Description

Load the osha\_air\_limits (old ACToR - flex) data from toxval sourcedb to toxval

### Usage

```
toxval.load.osha_air_limits(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.ow_dwsha
```

*Load the ow\_dwsha (old ACToR - flex) data from toxval sourcedb to toxval*

---

### Description

Load the ow\_dwsha (old ACToR - flex) data from toxval sourcedb to toxval

### Usage

```
toxval.load.ow_dwsha(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
log	If TRUE, send output to a log file

---

```
toxval.load.penn
```

*Load new\_penn\_table from toxval\_source to toxval*

---

**Description**

Load new\_penn\_table from toxval\_source to toxval

**Usage**

```
toxval.load.penn(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database to use.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.penn_dep
```

*Load the penn\_dep (old ACToR - flex)data from toxval sourcedb to toxval*

---

**Description**

Load the penn\_dep (old ACToR - flex)data from toxval sourcedb to toxval

**Usage**

```
toxval.load.penn_dep(toxval.db, source.db, log = F)
```

**Arguments**

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.pfas_150_sem
```

*Load pfas\_150\_sem from toxval\_source to toxval*

---

### Description

Load pfas\_150\_sem from toxval\_source to toxval

### Usage

```
toxval.load.pfas_150_sem(toxval.db, source.db, log = F)
```

### Arguments

toxval.db      The version of toxval into which the tables are loaded.

source.db      The source database to use.

verbose        If TRUE, print out extra diagnostic messages

---

```
toxval.load.pfas_summary_pods
```

*Load PFAS Summary PODs from toxval\_source to toxval*

---

### Description

Load PFAS Summary PODs from toxval\_source to toxval

### Usage

```
toxval.load.pfas_summary_pods(toxval.db, source.db, log = F)
```

### Arguments

toxval.db      The version of toxval into which the tables are loaded.

source.db      The version of toxval\_source from which the tables are loaded.

verbose        If TRUE, output extra debug information

---

```
toxval.load.postprocess
```

*Do all of the post-processing steps for a source*

---

### Description

Do all of the post-processing steps for a source

### Usage

```
toxval.load.postprocess(toxval.db, source.db, source, do.convert.units = F)
```

### Arguments

toxval.db	The database version to use
source	The source name
sourcedb	The source database name

---

```
toxval.load.pprtv.ncea
```

*Load pprtv from dev\_pprtv to toxval There is a known bug here - some of the POD values are repeated because they produce two kinds of RfD values (chronic and subchronic) - dealing with htis will require some work*

---

### Description

Load pprtv from dev\_pprtv to toxval There is a known bug here - some of the POD values are repeated because they produce two kinds of RfD values (chronic and subchronic) - dealing with htis will require some work

### Usage

```
toxval.load.pprtv.ncea(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	Whether the loaded rows should be printed to the console.

---

```
toxval.load.pprtv.ornl
```

*Load new\_pprtv\_ornl from toxval\_source to toxval*

---

### Description

Load new\_pprtv\_ornl from toxval\_source to toxval

### Usage

```
toxval.load.pprtv.ornl(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The source database from which data should be loaded
verbose	If TRUE, print out extra diagnostic messages

---

```
toxval.load.rsl
```

*Load the RSL data - the source database needs to be updated periodically*

---

### Description

Load the RSL data - the source database needs to be updated periodically

### Usage

```
toxval.load.rsl(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.skin.eye
```

*Load the Skin eye data*

---

### Description

Load the Skin eye data

### Usage

```
toxval.load.skin.eye(toxval.db, verbose = F)
```

### Arguments

toxval.db	Database version
verbose	if TRUE, print diagnostic messages along the way

---

```
toxval.load.source_chemical
```

*Perform the DSSTox mapping*

---

### Description

Perform the DSSTox mapping

### Usage

```
toxval.load.source_chemical(toxval.db, source.db, source = NULL, verbose = T)
```

### Arguments

toxval.db	The version of toxvaldb to use.
source.db	The source database version
source	The source to update for
verbose	If TRUE, print out extra diagnostic messages

---

`toxval.load.species`*Load the species table and the species\_id column in toxval*

---

### Description

This function replaces `fix.species`. This function precedes `toxvaldb.load.species`.

### Usage

```
toxval.load.species(toxval.db, restart = F, date_string = "2022-05-25")
```

### Arguments

<code>toxval.db</code>	The version of the database to use
<code>restart</code>	If TRUE, rest all of the <code>species_id</code> values in <code>toxval</code>
<code>date.string</code>	Date suffix on the input species dictionary

---

`toxval.load.test`     *Load new\_test\_table from toxval\_source to toxval*

---

### Description

Load `new_test_table` from `toxval_source` to `toxval`.

### Usage

```
toxval.load.test(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The version of <code>toxval</code> into which the tables are loaded.
<code>source.db</code>	The source database to use.
<code>verbose</code>	If TRUE, print out extra diagnostic messages

---

```
toxval.load.toxrefdb3
```

*Load ToxRefdb data to toxval*

---

### Description

Load ToxRefdb data to toxval

### Usage

```
toxval.load.toxrefdb3(toxval.db, source.db, log = F, do.init = F)
```

### Arguments

<code>toxval.db</code>	The version of toxval into which the tables are loaded.
<code>do.init</code>	if TRUE, read the data in from the toxrefdb database and set up the matrix
<code>verbose</code>	Whether the loaded rows should be printed to the console.

---

```
toxval.load.usgs_hbsl
```

*Load the usgs\_hbsl (old ACToR - flex)data from toxval sourcedb to toxval*

---

### Description

Load the usgs\_hbsl (old ACToR - flex)data from toxval sourcedb to toxval

### Usage

```
toxval.load.usgs_hbsl(toxval.db, source.db, log = F)
```

### Arguments

<code>toxval.db</code>	The database version to use
<code>source.db</code>	The source database
<code>verbose</code>	If TRUE, output extra debug information

---

```
toxval.load.who_ipcs
```

*Load the who\_ipcs (old ACToR - flex) data from toxval sourcedb to toxval*

---

### Description

Load the who\_ipcs (old ACToR - flex) data from toxval sourcedb to toxval

### Usage

```
toxval.load.who_ipcs(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The database version to use
source.db	The source database
verbose	If TRUE, output extra debug information

---

```
toxval.load.wignall
```

*Load Wignall from toxval\_source to toxval*

---

### Description

Load Wignall from toxval\_source to toxval

### Usage

```
toxval.load.wignall(toxval.db, source.db, log = F)
```

### Arguments

toxval.db	The version of toxval into which the tables are loaded.
source.db	The version of toxval_source from which the tables are loaded.
verbose	If TRUE, print out extra diagnostic messages

---

toxval.qc.step.1	<i>do an initial QC of the data by comparing the current database to an old one</i>
------------------	---

---

**Description**

do an initial QC of the data by comparing the current database to an old one

**Usage**

```
toxval.qc.step.1(db.new = "res_toxval_v92", db.old = "dev_toxval_v9_1")
```

**Arguments**

db.new	The new database version (toxval) for the comparison
db.old	= The old database version for the comparison

---

toxval.set.mw	<i>Set teh moleculr weight in the toxval table</i>
---------------	--

---

**Description**

Set teh moleculr weight in the toxval table

**Usage**

```
toxval.set.mw(toxval.db, source)
```

**Arguments**

toxval.db	The database version to use
source	The source
verbose	If TRUE, output extra debug information

---

toxval_source.hash.and.load
<i>Add the hash key to the source tables and add the new rows</i>

---

**Description**

Add the hash key to the source tables and add the new rows

**Usage**

```
toxval_source.hash.and.load(  
  db = "dev_toxval_source_v5",  
  source,  
  table,  
  do.reset = F,  
  do.insert = F,  
  res  
)
```

**Arguments**

db	The version of toxval_source into which the source is loaded.
source	Name of the source
table	Name of the database table
do.reset	If TRUE, delete data from the database for this source before inserting new data. Default FALSE
do.insert	If TRUE, insert data into the database, default TRUE
res	The data frame to be processed
